Internet Security Research Group (ISRG)
Legal Transparency Report

Reporting period: July 2015 - December 2015
Published April 1, 2016

The trust of our users is ISRG's most critical asset. Transparency regarding legal requests is an important part of making sure our users can trust us, and to that end we will be publishing reports twice annually. Reports will be published three months after the period covered in order to allow us time to research all requests and orders received during the period.

ISRG provides a secure, open, and transparent service for the public's benefit. As such, ISRG opposes the introduction of a back door, specialized law enforcement or government access, or any other deliberate weakness in Let's Encrypt or any of our systems. As of the date of this report, we have never received a request or demand of any kind, formal or informal from any government agency anywhere in the world, that ISRG include a back door, specialized access, or any other deliberate weakness in Let's Encrypt. If we were to receive such a request, we would oppose it with all the legal and technical tools available to us.

Type	Number	Users Affected
